

Electric Dual Vac

The Electric Dual Vac does not require compressed air to operate and is offered as an alternative vacuum source to the standard pressurized air driven Dual Vac system. An electric pump provides vacuum to hold scanner vacuum tracks in place. This all electric vacuum system has much lower utility costs than its pneumatically driven predecessor and is suitable for scanning in remote locations.

Features and Capabilities

- Electric pump with cooling fans for quiet operation
- Independent vacuum allocated for each track
- 120/240 VAC, 50/60 Hz
- Rugged, easy to carry or ship case
- Two 15' vacuum hoses
- CE approved
- Electrically powered versus pneumatically driven
- Portable self-contained system
- Dual vacuum track capability
- Quick set-up and teardown
- Works with all NDTs scanning arms
