

VACRS

VACUUM ASSISTED COUPLANT AND RECOVERY SYSTEM

Improve Inspection Time

A light weight couplant delivery and recovery system which makes it possible to accomplish C-scan with ultrasonic and bond testing sensors, including arrays without the water mess or hazard.

Features

- Delivers water, coupling the sensor to the inspection surface
- Recovers water leaving inspection surface dry
- Recycles and filters water to reduce waste
- Light weight transducer holder design
- CE Tested

Capabilities

- Can be used with multiple sensors
- Designed for use with any system that requires coupling
- Portable and easy to use
- Compatible with MAUS and AUSS Mobile

VACRS

VACUUM ASSISTED COUPLANT AND RECOVERY SYSTEM

VACRS Dual Vac System

Most versatile of the VACRS family. Provides exceptional filtration for dirty inspection environments and transfers vacuum to the tracks utilized for the scanners

VACRS Plus System

Enhanced VACRS II filtration system providing improved water coupling for dirty inspection environments

VACRS II

Portable, easy to use design provides couplant delivery and vacuum recovery with a basic sediment filter.
